Learning Outcomes

On completion of this course, learners will be able to:

- LO1: Explain the listen-think-talk architecture of a voice agent, select suitable business use cases, and design the n8n workflow and channel boundary.
- LO2: Build and verify an n8n voice agent that transcribes audio with Whisper, reasons with an AI Agent, speaks with ElevenLabs, and operates through browser and chat channels.
- LO3: Explain avatar-video architecture and build an n8n workflow that turns a governed brief into a talking-head video through an asynchronous video API.
- LO4: Automate a monitored video-production and distribution pipeline with approval, retry, accessibility, privacy, cost and human-handoff controls.

Learning Reinforcement

- Every topic is followed by hands-on labs that learners complete on their own machine.
- Each lab ends with a 'Test it' verification step so learners can confirm their own progress.
- The trainer circulates during lab time to give individual feedback and unblock learners.
- Each topic closes with a recap mapped back to the course learning outcomes.
